

## Major Reservoir Henderson, Nevada

HMT performs various services as part of a routine rehab program for one of Nevada's large reservoirs. These reservoirs are constructed to American Water Works Association specifications (AWWA D100).

The reservoirs production can only be disrupted for a short time and therefore the project is conducted in the winter months when water demand is lower. The plan includes power washing the reservoirs, sized from 40' in diameter to 216' diameter, performing API 653 inspections and recording dry film thickness of the coating. Structural analysis of the roof framing, cathodic protection and chlorination (disinfection) are also being performed.

HMT continues to provide these services. As a result of our efforts, the customer achieves compliance with a myriad of State and Federal environmental regulations and continues to operate effectively to provide the necessary utility service with minimal downtime to their operations.

HMT Inc.  
24 Waterway, Ste. 400
