

MINI-SHOE™ Primary Seal

The HMT MINI-SHOE™ Primary Seal is specifically designed for use with internal floating roofs, where tight rim spaces are often encountered. This seal has the same superior long-lasting qualities and positive vapor sealing capabilities as our Scissor Shoe Primary Seal, but is engineered to operate in narrow rim spaces.

The innovative feature of the seal is the HMT MINI-SHOE Type Hanger Assembly. It successfully maintains positive gap sealing ability while accommodating rim spaces as small as 2.5".

The utilization of 1/4 - hard spring stainless steel pusher bars provides equal consistent tension across the shoes. This not only provides a tight fitting seal, but equal

tension assists in keeping the floating roof centered.

Made of lightweight galvanized or stainless steel, the MINI-SHOE Primary Seal combines superior strength with economical corrosion prevention.

Each MINI-SHOE Primary Seal is designed for a specific tank application and is engineered for rapid field installation. With its wide range of metallic and non-metallic materials, the MINI-SHOE Primary Seal is resistant to virtually all products stored in floating roof tanks.

Contact your local HMT representative to discuss the full suite of products and services that will satisfy all your AST needs.

HMT'S MINI-SHOE™ Unique Design Features Include:

- Unique Mini-Shoe type hanger and Pusher Bar assemblies
- Compatibility with all stored products
- Compliance with EPA and local regulations
- Compatibility with welded and riveted tank shells
- Available with secondary seal systems
- Horizontal or vertical rim mounts

HMT'S Wide Range Of Seal Materials Include:

- Metallic
- Stainless Steel
- Galvanized Steel
- Primary vapor barrier fabric
 - HMT's PTFE Laminated Fluoropolym (Teflon®)
 - Urethane, polyester reinforced

These and other fabrics are available in various thicknesses
